

Daily Run — 2026-07-14 (Tuesday)

What changed today: - $\square$ **CPI June: 3.5% (−0.7pp from 4.2%), core 2.6% (−0.3pp)** — both below forecast → R revised −0.8 → −0.5 (CPI relief offsets Iran escalation) - $\square$ **BTC ETFs: −\$424.66M outflows Monday** — reversed last week's +\$197M inflow; 8-week outflow streak resumption? - $\triangle$ **Oil surges: WTI \$79.56 (+5.3%), Brent \$84.95 (+7.2%)** — Trump dropped 20% Hormuz fee; US naval blockade reimposed - $\square$ **UNI: V4 fee-expansion governance votes begin this week** — catalyst maintained; partial at ~\$3.80 still the next rung - **Warsh testimony: "not mission accomplished"** — hawkish; September hike odds 63% (down from 75%); no forward guidance - **Decisions pending: NVDA entry (day 4, ASML tomorrow), ONDO entry (cluster-cap decision), UNI partial timing**

§8 Step 0 — Account Parameters

From the 2026-07-13 run header: **Capital \$20,000, MaxLeverage 20x**. GS Tier 1 → heat cap 20% = **\$4,000**.

§8 Step 1 — Regime Read

Off-anchor update — CPI release. June CPI came in at 3.5% (vs 3.8% forecast, down from 4.2% in May), core CPI 2.6% (vs 2.9% forecast, down from 2.9%). Energy slumped 5.7% monthly (biggest drop since April 2020), gasoline −9.7%. Shelter just +0.1%, services ex-energy flat. This is a significant positive macro print that partially offsets the Iran escalation risk-off. However, Warsh testified to Congress that it's "one data point" and "not mission accomplished" — September hike still 63% priced (down from 75%). Oil surging (Brent ~\$85) creates a tension: June CPI relief was energy-driven, but July energy is re-accelerating. **R revised from −0.8 to −0.5** — CPI relief + equity rally (Nasdaq +0.98%) partially offset by oil surge and geopolitical risk.

Input	Value (July 14, 2026)	Signal
10Y UST yield	4.575% (−3bp on CPI)	Yields fell — dovish signal
2Y UST yield	4.191% (−7bp on CPI)	Short-end fell more — market pricing slower hikes
2s10s spread	~+0.38% (positive, stable)	No recession signal; steepened slightly
DXY	~100.5 (est. lower on CPI)	USD softened — risk-on
VIX	16.49 (−3.9%)	VIX dropped — fear easing
S&P 500	+0.39% (intraday)	Risk-on — CPI relief
Nasdaq	+0.98% (intraday)	Tech leads — CPI relief
Dow	−0.11% (intraday)	Lagging — oil/defense weight
Breadth	~66% S&P >200-day MA (est.)	Stable
CNN Fear & Greed	44 (Fear)	Improved from 49 neutral — CPI relief
Fed funds	3.50–3.75%	Unchanged; September hike 63% (down from 75%)
June CPI	3.5% YoY (−0.4% MoM)	$\triangle$ Major positive surprise
Core CPI	2.6% YoY (0.0% MoM)	$\triangle$ Major positive surprise
June payrolls	+57K (unchanged trigger)	Dominant growth signal — payrolls trigger still fired

Input	Value (July 14, 2026)	Signal
Gold	~\$4,002 (−2.9% July 13; ~\$4,066 intraday July 14 per Yahoo +1.51%)	Mixed — safe-haven bid vs CPI disinflation
Oil (WTI)	~\$79.56 (+1.82%)	⚠ SURGING — Hormuz blockade reimposed
Brent	~\$84.95 (+1.98%)	⚠ Near \$85 — highest in a month
HY OAS	~269bp (July 10 data; est. stable)	No credit stress
BTC ETF flows	−\$424.66M (Monday July 13)	⚠ Reversed last week's +\$197M inflow
BTC price	~\$62,550–62,667 (−1%)	Holding \$62K support
ETH price	~\$1,781–1,787 (+0.5%)	Slight recovery
SOL price	~\$75.07–77.06 (flat)	Testing 50-day EMA

R = −0.5 — risk-off but easing. CPI relief is real (biggest monthly drop since April 0.4% MoM, core flat), equities rallied, VIX fell, yields dropped. But oil at \$85 (Brent) + Iran escalation + hawkish Warsh (September hike still likely) + BTC ETF outflows cap the recovery. The tension: June CPI benefited from energy deflation, but July oil is re-accelerating — next month's print could revert. **Zone: CORE** ($|R| = 0.5 < 1.3$).

Regime smile ($RS = 0.6 \cdot R \cdot \beta$): high-beta (1.3) **−0.39** · normal (1.0) **−0.30** · defensive (0.7) **−0.21**

Growth-Score Dial

Trigger	Status	Detail
(a) Payrolls	FIRED ⚠	June +57K; 3-mo avg ~119K, trajectory sharply negative (unchanged)
(b) Curve	not fired	2s10s ~+0.38%, positive and stable
(c) Credit	not fired	HY OAS ~269bp, no >75bp spike above 3-mo low — oil spike bears watching for July

GS TIER = 1 → heat cap **\$4,000** (unchanged). The CPI print reduces the probability of a Tier 2 upgrade: hot CPI was the main path, and it came in cool. Oil sustained at \$85+ into August CPI could still trigger the credit trigger if HY OAS widens, but that's a future-run watch item, not today's call.

Watch items (macro — single list)

- **US-Iran escalation (dominant risk):** ceasefire broken; US bombed Iranian coastal targets Monday, reimposed naval blockade at 4pm ET Tuesday; Iran attacked two supertankers in Hormuz (1 mariner killed); Trump dropped 20% Hormuz protection fee, replaced with Gulf state investment deals. Citi warns: Iran may walk away from MoU until after midterms → higher-for-longer oil. Further escalation → R deeper; de-escalation → R recovers toward 0.
- **Oil at \$85 Brent:** June CPI energy deflation (−5.7%) will reverse in July if oil holds here. WTI \$79.56, Brent \$84.95 — both at 1-month highs. EIA STEO: Brent averaged \$85/b in June, \$22/b below May.
- **Warsh testimony (today):** hawkish — "no tolerance for high inflation," "not mission accomplished," committed to 2% target. September hike 63% (down from 75%). No forward guidance (his stated preference). Senate testimony tomorrow.
- **ASML earnings July 15 (tomorrow):** sole EUV supplier; Q2 results before European open; consensus expects within guidance; AI-capex evidence is the swing factor for the semi cluster. Applied Materials already reported record Q2 \$7.91B (+11% YoY), raised 2026 semi-equipment growth to >30%.
- **Big bank earnings this week:** JPM, C, BAC, WFC, MS, GS — credit/capex/buyback signals.
- **Clarity Act:** Lummis sets bill text timeline; Senate hearing July 17; 24-day clock to August recess for 60 votes. Bipartisan (15-9 committee vote). Crypto-complex catalyst — no direct action today.
- **BTC ETF flows:** −\$424.66M Monday reversed last week's +\$197M. Fidelity −\$245.6M, BlackRock also outflow. Watch whether this is a one-day reversal or resumption of the 8-week outflow streak.

§8 Step 2 — Freshness Check (Crypto)

Input	Primary source (July 14)	Q impact
Crypto F&G	CoinGabbar 22 (Extreme Fear); CFGI 48 (Neutral); CoinLore 23 — using P=25 (blended, fear zone)	□ current, down from 28
BTC price	~\$62,550–62,667 (Fortune \$62,549.73 6am ET; Bybit \$62,667; Yahoo \$62,865 8:21am)	□ current, –1%
ETH price	~\$1,781–1,787 (CoinMarketCap \$1,781.50; Fortune \$1,783.71; Changelly \$1,786.51)	□ current, +0.5%
SOL price	~\$75.07–77.06 (Coinbase \$75.07; CoinMarketCap \$77.06; Paybis \$77.21)	□ current, flat
UNI price	~\$3.52 (Coinbase); \$3.62 (Blockonomi) — rangebound	□ current
ONDO price	\$0.3083 (Coinbase, –3% from \$0.32; –7% from \$0.33 a week ago)	□ current, down
ETF flows	–\$424.66M Monday (Bitcoin.com; FinanceFeeds; BloomingBit)	□ current — today's data
Oil / Gold	WTI \$79.56, Brent \$84.95 (CNBC); Gold ~\$4,002 (TradingEconomics) / \$4,066 (Yahoo intraday)	□ current
NVDA / PLTR / MSTR	Robinhood NVDA \$204.35–207.93; PLTR \$126.20–130.72; MSTR \$97.045 (+5.37%)	□ current, live
Uniswap V4 fee expansion	CoinsPress: governance votes begin this week; Edaface: "\$5 back in focus"	□ current

Q adjustments (default 0.80): BTC **0.75** (↓ — ETF outflow reversal + extreme fear degrade confidence) · ETH **0.75** · SOL **0.75** · UNI **0.90** (fee switch multi-source confirmed, V4 expansion votes starting) · ONDO **0.80** · NVDA **0.85** · MSTR **0.75**.

§8 Step 3 — Tier-1 Screen

Asset	Price	24h Δ	Flag → Tier-2
BTC	~\$62,550–62,667	–1%	ETF outflow reversal; \$62K support test
ETH	~\$1,781–1,787	+0.5%	Slight recovery; still below 50-day EMA (~\$1,803)
SOL	~\$75.07–77.06	flat	Testing 50-day EMA; below 200-day (\$99.31)
UNI	~\$3.52–3.62	flat	V4 fee-expansion votes this week; strongest catalyst
ONDO	\$0.3083	–3%	Down 7% week-over-week; 24/7 tokenized stock minting launched
NVDA	\$204.35–207.93	~flat	Hot list; ASML earnings tomorrow; below 50-day
PLTR	\$126.20–130.72	+2.6% (Monday)	Closed yesterday; recovering from exit price \$129.425
MSTR	\$97.045	+5.37%	Bounced with BTC; still below all MAs
(all others)	—	—	Not screened — no notable data

§8 Step 4 — Tier-2 Deep Dives

BTC — Normal (1.0) — POSITION OPEN (Day 12)

- **Catalyst (0.28) = +0.5** (unchanged): CPI relief positive for risk assets but ETF outflows –\$424.66M Monday reversed last week's +\$197M (Bitcoin.com/FinanceFeeds). Fidelity –\$245.6M, BlackRock also

outflow. Clarity Act hearing July 17 positive. MSTR still hasn't bought BTC. Iran escalation remains a macro overhang.

- **Sentiment (0.30) = +1.0** (↑ from +0.80): P=25 → Extreme Fear zone (CoinGabbbar 22, CoinLore 23); base SC +1.0 (12-25 band → Fear at the boundary); divergence booster +0.0 (price decline aligned with ETF outflows, no divergence). The extreme fear reading at BTC \$62K with equities rallying is notable — crypto-specific fear diverging from equity sentiment (CNN F&G 44 vs crypto 22).
- **Trend (0.25) = 0.0** (unchanged): above 20-day MA (~\$61,500–62,000) but barely; below 50-day (~\$65,000–66,000) and 200-day. Price \$62,550 is clinging to the 20-day. Close below \$62K blocks new entries/adds.
- **Regime (0.12) = -0.30 · Secular (0.05) = +0.5** (Clarity Act, ETF adoption intact — shock is cyclical)
- **D = 0.28(0.5)+0.30(1.0)+0.25(0)+0.12(-0.30)+0.05(0.5) = +0.49** (↑ from +0.35 — sentiment boost from extreme fear dominates)
- **Conviction:** Strength 0.245, A = 0.389/0.589 = 0.661, Q 0.75 → round(1+9·(0.495·0.871·0.945)) = **5** (↑ from 4)
- **Action: HOLD** (below neutral band threshold? |D| = 0.49 ≥ 0.4, but Conv 5 < 6 → HOLD per \$5 entry rules; position is open and pre-breakeven). Position: July 3, \$61,500 entry, \$7,830 notional, \$56,000 stop. **R-progress: +0.18R** (~\$62,550 vs \$61,500 entry; entry-to-stop \$5,500 → +\$1,050 / \$5,500 = +0.19R). **Exit watch:** D +0.49 not ≤ -0.4; Conv 5 not < 4. Rung 1. +1R breakeven ~\$67,000. \$62K support is the line — a break with D going negative fires the decay trigger next run.

ETH — Normal (1.0) — POSITION OPEN (Day 11)

- **Catalyst (0.28) = +0.5** (unchanged): structural set intact (BlackRock staked ETHB; JPMorgan tokenized MMF; Glamsterdam H2 2026; "Lean Ethereum"; record-low exchange supply). Standard Chartered \$4,000 target overhangs. No fresh catalyst today.
- **Sentiment (0.30) = +0.90** (↑ from +0.70): P=25 → base +1.0; small divergence booster +0.0 (ETH recovered +0.5% while BTC fell — mild positive divergence but not strong enough for booster). Actually: P=25 places us in the 12-25 band → SC = +1.0 (Fear). Minor adjustment: crypto F&G is in extreme fear but ETH is outperforming BTC slightly.
- **Trend (0.25) = 0.0** (unchanged): below the 50-day EMA (~\$1,803) → trend-gate downgrade to starter-only; above 20-day (~\$1,713). Price \$1,781 is between the two.
- **Regime (0.12) = -0.30 · Secular (0.05) = +0.5**
- **D = 0.28(0.5)+0.30(0.90)+0.25(0)+0.12(-0.30)+0.05(0.5) = +0.43** (↑ from +0.32)
- **Conviction:** Strength 0.215, A = 0.389/0.599 = 0.650, Q 0.75 → round(1+9·(0.464·0.866·0.945)) = **5** (↑ from 4)
- **Action: HOLD** (D ≥ 0.4 but Conv 5 < 6 → HOLD). Position: July 4, \$1,720 entry, \$7,478 notional, \$1,490 stop. **R-progress: +0.38R** (~\$1,781 vs \$1,720 entry; entry-to-stop \$230 → +\$61 / \$230 = +0.27R... re-calculate: (\$1,781-\$1,720)/(\$1,720-\$1,490) = \$61/\$230 = +0.27R). **VERRIDE: risk \$1,000 (5% ceiling) vs \$800 formula at Conv 8 — operator-approved (renewed this run).** **Exit watch:** trigger NOT met; rung 1. 20-day ~\$1,713 is the support line. +1R at ~\$1,950 (entry-to-stop \$230 → +\$230 = \$1,950). Stop 16% below.

SOL — High-beta (1.3) — POSITION OPEN (Day 10)

- **Catalyst (0.28) = +0.5** (unchanged): no new catalyst; stablecoin/network fundamentals intact.
- **Sentiment (0.30) = +1.0** (↑ from +0.60): P=25 → base +1.0 (Fear zone); no divergence booster (SOL flat, aligned with market).
- **Trend (0.25) = 0.0** (unchanged): testing/below 50-day EMA (~\$75.96); Coinbase print \$75.07 is below; above 20-day (~\$74.65) — last short-term support. 21% below 200-day (\$99.31).
- **Regime (0.12) = -0.39** (high-beta 1.3) · **Secular (0.05) = +0.5**
- **D = 0.28(0.5)+0.30(1.0)+0.25(0)+0.12(-0.39)+0.05(0.5) = +0.48** (↑ from +0.27 — sentiment boost from extreme fear)

- **Conviction:** Strength 0.240, $A = 0.389/0.589 = 0.661$, $Q\ 0.75 \rightarrow \text{round}(1+9 \cdot (0.490 \cdot 0.871 \cdot 0.945)) = 5$ ($\uparrow$ from 4)
- **Action: HOLD** ($D \geq 0.4$ but $\text{Conv } 5 < 6 \rightarrow \text{HOLD}$). Position: July 5, \$81.19 entry, \$4,740 notional, \$69.19 stop. **R-progress:** **-0.50R to -0.39R** (\$75.07-\$81.19 = -\$6.12; entry-to-stop \$12 $\rightarrow$ -0.51R; at \$77.06 $\rightarrow$ -\$4.13/\$12 = -0.34R). **Exit watch:** trigger NOT met; rung 1. A break of \$74.65 with D going negative fires the decay trigger. Most vulnerable crypto position. The sentiment boost from extreme fear is the main thing keeping SOL's D above 0.4 — if fear eases back to the 28-35 range without a price recovery, D drops back below 0.4.

UNI — High-beta (1.3) — POSITION OPEN (Day 11) — ☐ STOP AT BE — FEE SWITCH LIVE

- **Catalyst (0.28) = +2.0** (maintained at max): fee switch confirmed live; V4 fee-expansion governance votes begin this week (CoinsPress: 93% support); Edaface: "Breakout Puts \$5 Back in Focus"; \$5.2M daily fees maintained (DefiLlama \$5.16M); Robinhood Chain contributing ~\$4.38M; UNI +35% from early-July ~\$2.70 low. Structural transformation: governance token $\rightarrow$ revenue-generating asset.
- **Sentiment (0.30) = +1.0** (maintained): P=25 base +1.0; divergence booster +0.40 — UNI holding \$3.52-3.62 while BTC/ETH/SOL remain under pressure (maximum-strength decoupling continues).
- **Trend (0.25) = +1.5** (maintained): above 10/20/50/100-day EMAs; holding the \$3.58 breakout zone despite the sell-off. Strongest trend in universe.
- **Regime (0.12) = -0.30 — \$3 confluence cap applied:** fresh idiosyncratic catalyst opposes the macro fade, so RS capped at -0.30.
- **Secular (0.05) = +1.0:** dominant DEX, now revenue-generating; 58% stable-to-stable volume share.
- **D = 0.28(2.0)+0.30(1.0)+0.25(1.5)+0.12(-0.30)+0.05(1.0) = +1.25** (unchanged — decoupling confirmed through another regime shift). **Conviction:** Strength 0.625, $A = 1.249/1.321 = 0.945$, $Q\ 0.90 \rightarrow 8$
- **Action: BUY, position open** (July 4, \$3.20 entry, \$1,600 notional). **Ladder:** rung 2 — stop at **\$3.20 (BE); +0.38R to +0.63R** (at \$3.52: $(\$3.52-\$3.20)/(\$3.20-\$2.70 \text{ stop} = \$0.50) \rightarrow +0.64R$; at \$3.62: $+0.84R$ — wait, re-check: original stop was \$2.70, moved to BE \$3.20 on July 12. R-progress from entry: $(\$3.52-\$3.20)/(\$3.20-\$2.70) = \$0.32/\$0.50 = +0.64R$; at \$3.62: $\$0.42/\$0.50 = +0.84R$). Rung 3 partial ($\frac{1}{3}$ - $\frac{1}{2}$ off) at **~\$3.80** (+1.2R from entry using original stop distance: $(\$3.80-\$3.20)/\$0.50 = +1.2R$ — approaching +1.5R target). Rung 4 trail (chandelier / 20-day) after the partial. The fee-switch momentum and V4 expansion votes this week could push UNI toward the \$3.80 partial level.

ONDO — High-beta (1.3) — persistence day 8, no position

- **Catalyst (0.28) = +1.5** (unchanged): Ondo launched 24/7 minting/redemption for tokenized stocks (TheStreet Crypto: "closing the gap between traditional and crypto markets"); MEXC added SK Hynix (SKHYON) via Ondo; OUSG \$407M; Ondo Perps live since July 7. Tokenized stock execution costs 25-38x cheaper on Ondo than competitors.
- **Sentiment (0.30) = +1.0** ($\uparrow$ from +0.60): P=25 $\rightarrow$ base +1.0 (Fear zone); no divergence booster (ONDO down 3%, aligned).
- **Trend (0.25) = +0.5** (unchanged): \$0.308 above \$0.31 support / ~20-day EMA (barely — \$0.308 is testing the support). **Regime (0.12) = -0.30** (\$3 cap — fresh catalyst). **Secular (0.05) = +1.0** (RWA leadership, tokenized stocks).
- **D = 0.28(1.5)+0.30(1.0)+0.25(0.5)+0.12(-0.30)+0.05(1.0) = +0.84** ($\uparrow$ from +0.74 — sentiment boost). **Conviction:** Strength 0.420, $A = 0.790/0.930 = 0.849$, $Q\ 0.80 \rightarrow \text{round}(1+9 \cdot (0.648 \cdot 0.946 \cdot 0.956)) = 7$ ($\uparrow$ from 6)
- **Action: BUY signal — entry decision open.** At current-stop risk accounting (\$7c): crypto cluster is \$2,400/\$3,000 $\rightarrow$ \$600 headroom. ONDO formula risk at Conv 7: $\text{Capital } \$20,000 \times 5\% \times (7/10) = \700 . **\$600 headroom < \$700 formula risk $\rightarrow$ cap-blocked at full size.** Options: enter at \$600 risk (Conv 6 equivalent, ~86% of formula), or trim SOL to free space, or pass. Operator decision ($\rightarrow$ Operator decisions).

NVDA — High-beta (1.3) — HOT LIST — persistence day 4, no position

- **Catalyst (0.32) = +1.5** (↑ from +1.0): ASML earnings tomorrow July 15 (24/7 Wall St: "no-brainer buy before earnings"; Motley Fool: "could send the stock soaring"); Applied Materials record Q2 \$7.91B (+11% YoY), raised 2026 semi-equipment growth to >30%; ASML +3.04% today. CPI relief positive for tech. UAE export easing drove NVDA +4% recently (TradingKey).
- **Sentiment (0.22) = +0.2** (unchanged): $P=44$ middle band → $+0.4 \cdot \text{sign}(\text{Trend})$, blended down for crypto-specific fear spillover.
- **Trend (0.26) = +0.5** (unchanged): \$207.57 above the 20-day MA (~\$200-205); below the 50-day (~\$215-220) → **starter only, ½ formula size**. Close below \$200 re-blocks the gate.
- **Regime (0.15) = -0.39** (high-beta 1.3, $R=-0.5$) · **Secular (0.05) = +0.5**
- **D = 0.32(1.5)+0.22(0.2)+0.26(0.5)+0.15(-0.39)+0.05(0.5) = +0.55** (↑ from +0.42 — ASML catalyst boost). **Conviction:** Strength 0.275, $A = 0.455/0.745 = 0.611$, $Q 0.85$ → $\text{round}(1+9 \cdot (0.524 \cdot 0.862 \cdot 0.967)) = 6$ (↑ from 5)
- **Action: BUY-ELIGIBLE** ($D \geq 0.4$ ×4 runs □, $\text{Conv} \geq 6$ □ now, gate: 20-day □ → ½ size, cost hurdle: clears, persistence: ≥ 2 days □). **Entry decision: operator go/no-go before ASML tomorrow.** Risk at $\text{Conv } 6$, ½ size: Capital $\$20,000 \times 5\% \times (6/10) \times 0.5 = \300 . Semi cluster: \$0 used / \$3,000 cap → ample headroom. Entry at ½ formula size (\$300 risk, stop ~\$195-198 → ~\$600-1,000 notional).

PLTR — High-beta (1.3) — CLOSED 2026-07-13 (no position)

- **Catalyst (0.32) = +1.0** (unchanged): in Trefis support zone (\$122.59-\$135.49); Barchart EPS \$1.17 FY26 / \$1.66 FY27; Q2 earnings approaching. PLTR traded \$126.20-\$130.72 today (Monday close \$130.04, +2.56%).
- **Sentiment (0.22) = +0.5**: PLTR-specific $P \approx 30$ → SC +0.50.
- **Trend (0.26) = -0.5**: below the 20-day MA (~\$130-135); gate blocks new entries.
- **Regime (0.15) = -0.39** · **Secular (0.05) = +0.5**
- **D = +0.23** (unchanged). **Conviction:** Strength 0.115, $A 0.340$, $Q 0.80$ → **3**
- **Action: HOLD/AVOID** (no position; trend gate blocks; closed yesterday at -0.39R). Re-entry requires a daily close above the 20-day MA (~\$135) with $D \geq 0.4$ and $\text{Conv} \geq 6$.

MSTR — High-beta (1.3), BTC-proxy cluster — no position

- **Catalyst (0.32) = -0.5** (unchanged): sold 4.8M shares (\$466.7M), bought no BTC; \$1.25B BTC-sale option outstanding; TD Cowen PT \$260 (199% upside from ~\$87, revised). MSTR +5.37% today to \$97.045.
- **Sentiment (0.22) = +1.0** (↑ from +0.5): $P=25$ → base +1.0 (Fear zone); MSTR bouncing +5.37% with BTC — divergence from its own bearish catalyst (price up while fundamentals dilutive) → momentum-driven, no booster.
- **Trend (0.26) = -1.0** (unchanged): ~\$97, below all MAs (EMA20 \$108.91, EMA50 \$128.54, EMA200 \$184.21) — gate blocks.
- **Regime (0.15) = -0.39** · **Secular (0.05) = 0.0**
- **D = -0.31** (↑ from -0.40 — sentiment boost from Fear). **Conviction:** Strength 0.155, $A 0.511$, $Q 0.75$ → **4**
- **Action: HOLD/avoid.** No position; trend gate blocks. Improving but still below all MAs.

RKLB — High-beta (1.3) — no position

No fresh data; all prior bearish factors stand (below 200-day, CEO selling \$465M, Iridium concerns, $Q 0.65$). **Action: HOLD/AVOID** (unchanged).

Field	Value
DATE	2026-07-14
CAPITAL	\$20,000
MAXLEV	20×
REGIME R	−0.5 (off-anchor update: CPI June 3.5%/core 2.6% beat offsets Iran escalation; R −0.8 → −0.5)
ANCHOR	2026-07-13 close + July 14 CPI release (CPI 3.5% vs 3.8% forecast; core 2.6% vs 2.9%; energy −5.7% MoM; WTI \$79.56 +1.82%, Brent \$84.95 +1.98%; VIX 16.49 −3.9%; 2Y 4.191% −7bp, 10Y 4.575% −3bp)
ZONE	CORE ($ R = 0.5 < 1.3$)
GS TIER	1 (payrolls fired, unchanged; curve/credit not fired; CPI cool reduces Tier 2 upgrade probability)
HOT LIST	NVDA (op, added 2026-07-12)

Run notes

CPI beat (3.5%/2.6% vs 3.8%/2.9%) drove R −0.8 → −0.5; equities rallied (Nasdaq +0.98%), VIX fell, yields dropped. But oil surged (Brent \$85) on US-Iran escalation — June energy deflation may reverse in July. Warsh: "not mission accomplished," September hike 63% (down from 75%). BTC ETFs −\$424.66M Monday reversed last week's inflow — watch for streak resumption. Crypto F&G dropped to Extreme Fear (22-25) while equities are only at Fear (44) — crypto-specific fear diverging from equity sentiment, boosting crypto sentiment scores. Broad upgrades: BTC +0.35 → +0.49 Conv 4→5, ETH +0.32 → +0.43 Conv 4→5, SOL +0.27 → +0.48 Conv 4→5 — all still HOLD (Conv < 6 for entry; positions pre-breakeven). UNI unchanged at D +1.25 Conv 8 — decoupling confirmed. ONDO D +0.74 → +0.84 Conv 6→7 but cap-blocked at full formula (\$700 vs \$600 headroom). NVDA D +0.42 → +0.55 Conv 5→6 — now fully entry-eligible (Conv ≥ 6), ASML tomorrow is the swing. Decisions pending: NVDA entry, ONDO sizing, UNI partial.

Asset ratings

Asset	Class	D	Conv	Action	β-tier	Key factors	Rationale (1 line)	Prior action	Days in trade	R-progress	Stop
UNI	crypto	+1.25	8	BUY ☐	high-beta	Cat +2.0, Sent +1.0, Trend +1.5	Fee switch live, V4 votes this week; partial at ~\$3.80 (+1.2R) approaching	BUY ☐ → BUY ☐	11	+0.64R to +0.84R (~\$3.52-3.62 vs \$3.20 entry)	3.20 (BE). ADDS: CLOSED (partial exit not yet taken)

Asset	Class	D	Conv	Action	β-tier	Key factors	Rationale (1 line)	Prior action	Days in trade	R-progress	Stop
ONDO	crypto	+0.84	7	BUY □ (cap-constrained)	high-beta	Cat +1.5, Sent +1.0, Trend +0.5	24/7 tokenized stock minting live; Conv 7 but \$700 formula > \$600 cluster headroom — operator sizing decision	BUY □ → BUY □↑	0	—	—
NVDA	equity	+0.55	6	BUY □ (entry-eligible)	high-beta	Cat +1.5, Sent +0.2, Trend +0.5	Hot list, day 4, Conv 6, ½ size; ASML July 15 is the swing — enter before or after?	BUY-ELIGIBLE □ → BUY □↑	0	—	—
BTC	crypto	+0.49	5	HOLD ↑△	normal	Cat +0.5, Sent +1.0, Trend 0.0	Extreme fear boosts sentiment; ETF outflows — \$425M cap Conv; \$62K support watch	HOLD ↓△ → HOLD ↑△	12	+0.19R (~\$62,550 vs \$61,500 entry)	56,000 (initial). ADDS: CLOSED (partial exit not yet taken)
SOL	crypto	+0.48	5	HOLD ↑△	high-beta	Cat +0.5, Sent +1.0, Trend 0.0	Fear boost lifts D above 0.4; fragile — if fear eases without price recovery, D drops back	HOLD ↓△ → HOLD ↑△	10	−0.34R to −0.51R (~\$75.07–77.06 vs \$81.19 entry)	69.19 (initial). ADDS: CLOSED (partial exit not yet taken)
ETH	crypto	+0.43	5	HOLD ↑△	normal	Cat +0.5, Sent +0.90, Trend 0.0	Below 50-day; sentiment boost from fear; 20-day (\$1,713) is the line. OVERRIDE: risk \$1,000 vs \$800 formula — operator-approved	HOLD ↓△ → HOLD ↑△	11	+0.27R (~\$1,781 vs \$1,720 entry)	1,490 (initial). ADDS: CLOSED (partial exit not yet taken)

Portfolio guardrails (CAPITAL \$20,000 · MAXLEV 20× · GS Tier 1 → heat cap 20%)

Guardrail	Limit	Used	Status
Per-trade risk (MaxRisk 5%)	\$1,000	\$1,000 (ETH — OVERRIDE, see §9 table)	△ 100%
Portfolio heat (Tier 1 → 20%)	\$4,000	\$2,400 (at current stops — UNI counts \$0 at BE)	□ 60%
Crypto cluster (15%)	\$3,000	\$2,400 (at current stops — UNI counts \$0 at BE)	□ 80% — \$600 headroom
High-beta AI/software cluster (15%)	\$3,000	\$0 (PLTR closed; NVDA not yet entered)	□ 0%
Per-asset notional (1× Capital)	\$20,000	\$7,830 (BTC)	□ 39.2%
Total notional (MaxLev × Capital)	\$400,000	\$21,648	□ 5.4%

Operator decisions & watch levels

#	Item	Trigger / level	Action	Detail
1	□ UNI partial	\$3.78–3.80 (~+1.2R)	Take ½–½ off; then trail runner (chandelier / 20-day)	V4 governance votes this week could push toward \$3.80; fee-switch momentum
2	NVDA entry	Eligible now at ½ formula size (risk \$300; semi cluster \$3,000 headroom)	Enter before ASML (tomorrow AM) or wait for ASML result (Conv could go to 7 on beat)	→ NVDA Tier-2
3	ONDO entry	\$700 formula risk (Conv 7) > \$600 cluster headroom → cap-constrained	Enter at \$600 (86% of formula), trim SOL to free space, or pass	→ ONDO Tier-2
4	BTC exit watch	\$62K support; D negative next run would fire decay trigger	No action unless triggered; +1R/BE at ~\$67,000	→ BTC Tier-2
5	ETH exit watch / gate	20-day EMA ~\$1,713 (down) · 50-day ~\$1,803 (up)	Break of \$1,713 → likely D negative next run; +1R/BE at ~\$1,950. Reclaim of \$1,803 restores full-size gate but no scale-up ticket — Conv 5 < 6 (§7b)	→ ETH Tier-2
6	SOL exit watch	20-day EMA ~\$74.65	Break + D negative → decay trigger; also the trim candidate for #3	→ SOL Tier-2
7	BTC ETF flows	Watch Tuesday's data — if outflows continue, streak resumption confirmed	Another large outflow → BTC sentiment deteriorates further; sustained inflow → sentiment booster	→ step 1 watch items
8	ASML July 15	Beat → semi-bottoming confirmed, NVDA Conv likely 7; miss → NVDA D drops, entry invalidated	Feeds #2	→ step 1 watch items
9	Oil / Iran	Brent sustained \$85+ into August → July CPI energy re-accelerates, R could go deeper; ceasefire → R recovers	Watch for Hormuz blockade impact on shipping	→ step 1 watch items
10	Clarity Act	Senate hearing July 17; 24-day clock to August recess	Crypto-complex catalyst; no direct action	→ step 1 watch items
