

Daily Run — 2026-07-16 (Thursday)

What changed today: - **TSMC Q2 record: revenue \$40.2B (+36% YoY), gross margin 67.7%, net profit +77.4%, raised 2026 outlook + \$100B US investment** — confirms AI/semi cycle; TSM stock fell ~4% on capex concerns but the demand signal is unambiguous - **ONDO +16-18% to \$0.3735** — launched first tokenized stocks backed by DTC Tokenized Entitlements via DTCC Tokenization Service (CRCL, SPY tokenized); reclaiming 200-day EMA (~\$0.377) - **ETH at ~\$1,917-1,924, testing 100-day EMA (\$1,943) and descending trendline** — +1.5-3.2%; approaching +1R/BE at ~\$1,950 - **Iran: Tehran says peace deal voided, "existential war"; US launches new strikes; ceasefire collapsing** — markets still pricing through (equities flat, oil down slightly) - **BTC flat at ~\$64,734 (-0.34%)** — holding above 50-day MA (~\$63,359); below 200-day (~\$74,137); ETF flows +\$181M Tuesday (Wed data pending) - **UNI at \$3.64, V4 volume surged 31% to \$1.47B** — approaching \$3.80 partial target (+1.2R); Clarity Act hearing tomorrow (July 17, NYC)

§8 Step 0 — Account Parameters

From the 2026-07-15 run header: **Capital \$20,000, MaxLeverage 20x**. GS Tier 1 → heat cap 20% = **\$4,000**.

§8 Step 1 — Regime Read

Anchored to July 15 close. July 16 intraday data is noted as watch items but does not re-set R. The prior day's PPI/Williams softness is now in the anchor; today's incremental data (TSMC beat, Iran escalation, flat BTC) is largely confirmatory of the existing R = -0.3 read. TSMC's record Q2 and raised outlook reinforce the semi/AI cycle bottoming thesis (catalyst for NVDA cluster), while Iran voiding the ceasefire is a negative that markets continue to absorb. No scheduled macro release today. **R unchanged at -0.3** (core zone).

Input	Value (July 15 close / July 16 intraday)	Signal
10Y UST yield	4.573% (July 16, +2bp)	Stable — yields firming slightly
2Y UST yield	~4.19% (est., stable)	Stable
2s10s spread	~+0.38% (positive, slight compression)	No recession signal
DXY	~100.3 (est., stable)	USD stable
VIX	15.95 (+1.79%) / futures 16.35 (+4.34%)	Slight uptick — Iran noise
S&P 500	7,572.40 (July 15 close, +0.38%)	Risk-on — PPI relief
Nasdaq	26,269.23 (July 15 close, +0.62%)	Tech leads — ASML catalyst
Dow	52,658.64 (July 15 close, +0.29%)	Lagging
Russell 2000	+0.39% (July 15)	Broad risk-on
Breadth	~62% S&P > 50-day MA (Schwab)	Improving
CNN F&G	~46 (Neutral, improved from 43.3)	Sentiment recovering
Fed funds	3.50-3.75%	Unchanged
June CPI	3.5% YoY (prior day)	In anchor
June PPI	-0.3% MoM, 5.5% YoY (prior day)	In anchor
June payrolls	+57K (unchanged trigger)	Payrolls trigger still fired
Gold	\$4,036-4,040 (-0.6%)	Safe-haven bid fading
Silver	\$56.32 (-2.45%)	Risk-on

Input	Value (July 15 close / July 16 intraday)	Signal
WTI	\$80.17 (July 15, +1.05%)	Elevated but stable
Brent	\$84.63 (July 16, -0.37%)	Slightly down — Iran priced in
HY OAS	~269bp (July 10 data, est.)	No credit stress
BTC ETF flows	+\$181M Tuesday (Wed data pending)	Inflows returned
BTC price	~\$64,734 (-0.34%)	Holding above 50-day
ETH price	~\$1,917-1,924 (+1.5-3.2%)	Testing 100-day EMA
SOL price	~\$77.42-78.01	Above 50-day, stable
TSMC Q2	Revenue \$40.2B (+36% YoY), GM 67.7%, EPS \$4.31	⚠ Record beat, raised outlook

R = -0.3 (unchanged from prior run — no new scheduled macro release; today's data is confirmatory).

Zone: CORE ($|R| = 0.3 < 1.3$).

Regime smile (RS = 0.6 · R · β): high-beta (1.3) **-0.23** · normal (1.0) **-0.18** · defensive (0.7) **-0.13**

Growth-Scare Dial

Trigger	Status	Detail
(a) Payrolls	FIRE ⚠	June +57K; 3-mo avg ~119K, trajectory sharply negative (unchanged)
(b) Curve	not fired	2s10s ~+0.38%, positive and stable
(c) Credit	not fired	HY OAS ~269bp, no >75bp spike above 3-mo low

GS TIER = 1 → heat cap **\$4,000** (unchanged).

Watch items (macro — single list)

- **US-Iran escalation (dominant risk):** Tehran declared peace deal voided, "existential war"; US launched new strikes July 16; ceasefire collapsing (Al Jazeera). Markets still pricing through (equities flat, Brent down 0.37%) but a Hormuz closure or tanker sinking would force R deeper. De-escalation → R recovers toward 0.
- **TSMC Q2 record beat/raise:** Revenue \$40.2B (+36% YoY), gross margin 67.7%, net profit +77.4%, raised 2026 outlook, \$100B US investment. TSM stock fell ~4% on capex concerns but demand signal is unambiguous — confirms AI/semi cycle for NVDA cluster.
- **Clarity Act field hearing July 17 (NYC):** House Financial Services Committee hearing "Building the Future of Finance" — last high-profile push before Senate floor vote ahead of August recess. Crypto-complex catalyst; no direct action today.
- **BTC ETF flows:** +\$181M Tuesday reversed Monday's -\$425M (BlackRock-led). Wednesday data pending. Watch for sustained inflow streak.
- **Oil at \$85 Brent:** July CPI/PPI energy deflation benefited from pre-spike energy; sustained \$85+ into August could reverse. Brent down 0.37% today.
- **UNI V4 volume surge:** Trading volume jumped 31% to \$1.47B (MSB Intel). Robinhood Chain contributing ~\$4.38M daily fees. Fee switch governance votes live.
- **ONDO DTCC integration:** First tokenized stocks backed by DTC Tokenized Entitlements (CRCL, SPY). Structural RWA catalyst — ONDO +16-18%.
- **MSTR dilution:** Sold \$467M shares, bought no BTC; stock dropped below 61.8% Fib at ~\$96; Phong Le says won't buy BTC until STRC hits \$100 par. Bearish.

§8 Step 2 — Freshness Check (Crypto)

Input	Primary source (July 16)	Q impact
Crypto F&G	25–26 (Fear, up from 22–25) — feargreedmeter, CoinStats, CoinLore	□ current, stable
BTC price	~\$64,734 (Yahoo, InteractiveCrypto, CoinStats)	□ current, −0.34%
ETH price	~\$1,917–1,924 (Yahoo, CoinGecko, Cryptonews)	□ current, +1.5–3.2%
SOL price	~\$77.42–78.01 (Coinbase, OKX, Changelly)	□ current, stable
UNI price	~\$3.64 (TronWeekly, Cryptonews)	□ current, V4 volume +31%
ONDO price	\$0.3735 (Coinbase, CryptoTimes, Coinpedia, Invezz)	□ current, +16–18%
ETF flows	+\$181M Tuesday (InteractiveCrypto, CoinDesk); Wednesday pending	△ Wed data not yet available
Oil / Gold	WTI \$80.17, Brent \$84.63, Gold \$4,036–4,040, Silver \$56.32 (TradingEconomics, USA Today)	□ current
NVDA	~\$210.32–212.50 (Robinhood, Kraken, Google Finance)	□ current
TSMC	Q2 results released July 16 — \$40.2B revenue, GM 67.7%, EPS \$4.31 (TSMC IR, TechPowerUp, TradingKey, Investing.com)	□ current — today's earnings
PLTR	\$133.72 (Tuesday close); no fresh July 16 data	△ slightly stale
MSTR	~\$92–96 (CoinGape, Memeburn); below 61.8% Fib	□ current
CNN F&G	~46 Neutral (Benzinga, FinHacker)	□ current

Q adjustments (default 0.80): BTC **0.80** (unchanged — ETF flows stale for Wed but price current) · ETH **0.85** (↑ from 0.80 — testing 100-day EMA, multi-source confirmed, Morgan Stanley staking ETF news) · SOL **0.78** (unchanged) · UNI **0.90** (unchanged — V4 volume data current, fee switch multi-source) · ONDO **0.95** (↑ from 0.85 — DTCC tokenized stocks launched, Ondo official blog, multiple sources, price +16–18%) · NVDA **0.92** (↑ from 0.90 — TSMC record beat/raise confirms semi cycle) · MSTR **0.75** (unchanged) · PLTR **0.75** (↓ from 0.80 — no fresh data).

§8 Step 3 — Tier-1 Screen

Asset	Price	24h Δ	Flag → Tier-2
BTC	~\$64,734	−0.34%	Holding above 50-day MA (~\$63,359); below 200-day (~\$74,137). Consolidating below \$65K.
ETH	~\$1,917–1,924	+1.5–3.2%	□ Testing 100-day EMA (\$1,943) and descending trendline — key resistance; above 20/50-day
SOL	~\$77.42–78.01	~flat	Above 50-day (~\$75.96); stable. Below 200-day (~\$99.31).
UNI	~\$3.64	~flat	V4 volume +31% to \$1.47B; approaching \$3.80 partial target (+1.2R)
ONDO	\$0.3735	+16–18%	□ DTCC tokenized stocks live; reclaiming 200-day EMA (~\$0.377); structural catalyst
NVDA	~\$210.32–212.50	~flat	TSMC beat/raise confirms semi cycle; below 50-day (~\$215–220); scale-up watch
TSM	~\$410 (est., −4%)	−4%	Record Q2 but stock fell on capex concerns; semi cluster signal

Asset	Price	24h Δ	Flag → Tier-2
PLTR	\$133.72 (Tue close)	—	Below 20-day (~\$135); stale data
MSTR	~\$92-96	↓	Below 61.8% Fib; dilution overhang; BTC flat doesn't help
(all others)	—	—	Not screened — no notable data

§8 Step 4 — Tier-2 Deep Dives

BTC — Normal (1.0) — POSITION OPEN (Day 14)

- **Catalyst (0.28) = +1.0** (unchanged): ETF inflows +\$181M Tuesday (Wed data pending); PPI soft in anchor; Clarity Act hearing tomorrow; Iran escalation overhang but markets pricing through. BTC consolidating above 50-day MA — constructive but not surging.
- **Sentiment (0.30) = +1.0** (unchanged): P=25 → Fear zone (feargreedmeter 25, CoinStats 26, CoinLore 23); base SC +1.0. Divergence booster +0.0 (price stable aligned with sentiment stable).
- **Trend (0.25) = +0.5** (unchanged): ~\$64,734 above 20-day (~\$62K) and above 50-day (~\$63,359 — reclaimed). Below 200-day (~\$74,137). 50-day reclaim confirms trend-gate full-size, but no daily close above \$65K yet to signal further momentum. Price action is consolidation, not acceleration.
- **Regime (0.12) = -0.18** ($R = -0.3$, normal $\beta = 1.0$) · **Secular (0.05) = +0.5**
- **D = 0.28(1.0)+0.30(1.0)+0.25(0.5)+0.12(-0.18)+0.05(0.5) = +0.73** (unchanged)
- **Conviction:** Strength 0.365, A = 0.589/0.739 = 0.797, Q 0.80 → **6** (unchanged)
- **Action: HOLD.** Position: July 3, \$61,500 entry, \$7,830 notional, \$56,000 stop. **R-progress: +0.59R** (~\$64,734 vs \$61,500 entry; entry-to-stop \$5,500 → +\$3,234 / \$5,500 = +0.59R). Rung 1. +1R/BE at ~\$67,000. 50-day reclaim enables full-size adds but scale-up doesn't fire (starter \$700 > formula \$600 at Conv 6). **ADDS: CLOSED (partial exit not yet taken).**

ETH — Normal (1.0) — POSITION OPEN (Day 13)

- **Catalyst (0.28) = +1.0** (unchanged): DTCC tokenization trial (in anchor); Morgan Stanley staking ETH ETF news (Cryptonews); ETH ETF inflows +\$58M (prior). ETH +1.5-3.2% testing 100-day EMA (\$1,943) and descending trendline — key resistance since February. Clarity Act hearing tomorrow.
- **Sentiment (0.30) = +1.0** (unchanged): P=25 → base +1.0 (Fear zone); divergence booster +0.0.
- **Trend (0.25) = +0.5** (unchanged): ~\$1,917-1,924 above 20-day (\$1,765) and 50-day (\$1,804 — reclaimed prior run). Testing 100-day EMA (\$1,943) and multi-month descending trendline. 200-day still above (~\$2,100+). Trend intact; 100-day/trendline is the resistance to watch — a break above would be significant.
- **Regime (0.12) = -0.18** · **Secular (0.05) = +0.5**
- **D = 0.28(1.0)+0.30(1.0)+0.25(0.5)+0.12(-0.18)+0.05(0.5) = +0.73** (unchanged)
- **Conviction:** Strength 0.365, A = 0.589/0.739 = 0.797, Q 0.85 → round($1+9 \cdot (0.604 \cdot 0.937 \cdot 0.964)$) = **6** (unchanged — Q up but rounds to same)
- **Action: HOLD.** Position: July 4, \$1,720 entry, \$7,478 notional, \$1,490 stop. **R-progress: +0.86R to +0.88R** (~\$1,917-1,924 vs \$1,720 entry; entry-to-stop \$230 → +\$197-204 / \$230 = +0.86-0.88R). **Approaching +1R/BE at ~\$1,950** — only ~1.4-3.3% away. If ETH closes at/above \$1,950, stop moves to breakeven (\$1,720). The 100-day EMA (\$1,943) and descending trendline are just below the +1R level — a break above both would likely trigger the breakeven move. **OVERRIDE: risk \$1,000 (5% ceiling) vs \$600 formula at Conv 6 — operator-approved (renewed this run).** **ADDS: CLOSED (partial exit not yet taken).**

SOL — High-beta (1.3) — POSITION OPEN (Day 12)

- **Catalyst (0.28) = +0.5** (unchanged): no fresh SOL-specific catalyst; network fundamentals intact.

- **Sentiment (0.30) = +1.0** (unchanged): P=25 → base +1.0 (Fear zone); no divergence booster.
- **Trend (0.25) = +0.5** (unchanged): ~\$77.42–78.01 above 20-day (~\$74.65) and 50-day (~\$75.96 — reclaimed). Below 200-day (~\$99.31). Position has stabilized above both short-term MAs.
- **Regime (0.12) = -0.23** (high-beta 1.3, R=-0.3) · **Secular (0.05) = +0.5**
- **D = 0.28(0.5)+0.30(1.0)+0.25(0.5)+0.12(-0.23)+0.05(0.5) = +0.70** (unchanged)
- **Conviction:** Strength 0.350, A = 0.569/0.729 = 0.780, Q 0.78 → **6** (unchanged)
- **Action: HOLD.** Position: July 5, \$81.19 entry, \$4,740 notional, \$69.19 stop. **R-progress: -0.31R to -0.27R** (\$77.42–78.01 vs \$81.19 entry; entry-to-stop \$12 → -\$3.18–3.77 / \$12 = -0.27–0.31R). Still underwater but stable above 50-day. +1R/BE at ~\$93.19. **ADDS: CLOSED (partial exit not yet taken).**

UNI — High-beta (1.3) — POSITION OPEN (Day 13) — □ APPROACHING PARTIAL

- **Catalyst (0.28) = +2.0** (maintained at max): V4 protocol fees activated; V4 trading volume surged 31% to \$1.47B (MSB Intel). Robinhood Chain contributing ~\$4.38M daily fees. Three governance votes live (74–93% support). V4 Index/ETH pool charges 3% native ETH fee via Hook, purchasing tokenized stocks (news.futunn). First sustained UNI burn mechanism. Clarity Act hearing July 17 — regulatory clarity catalyst. "Breakout Puts \$5 Back in Focus" (Edaface).
- **Sentiment (0.30) = +1.0** (maintained): P=25 → base +1.0; divergence booster +0.40 — UNI holding while broad crypto was under pressure (maximum-strength decoupling continues).
- **Trend (0.25) = +1.5** (maintained): above 10/20/50/100-day EMAs; holding the \$3.58 breakout zone. Strongest trend in universe.
- **Regime (0.12) = -0.23 — \$3 confluence cap applied:** fresh idiosyncratic catalyst opposes the macro fade, RS capped.
- **Secular (0.05) = +1.0:** dominant DEX, now revenue-generating + burning UNI; DTCC tokenization validates on-chain settlement thesis.
- **D = 0.28(2.0)+0.30(1.0)+0.25(1.5)+0.12(-0.23)+0.05(1.0) = +1.27** (unchanged). **Conviction:** Strength 0.635, A = 1.267/1.337 = 0.948, Q 0.90 → **8** (unchanged)
- **Action: BUY, position open** (July 4, \$3.20 entry, \$1,600 notional). **Ladder:** rung 2 — stop at **\$3.20 (BE); +0.88R** (at \$3.64: (\$3.64–\$3.20)/\$0.50 = +0.88R). **Rung 3 partial (1/3–1/2 off) at ~\$3.80** (+1.2R). UNI at \$3.64 is ~4.4% from \$3.80. V4 volume surge and Clarity Act hearing tomorrow could push UNI to \$3.80+. **If UNI closes at/above \$3.80, take 1/3–1/2 off (~\$533–\$800 notional, ~160–250 UNI), move stop to BE on remainder, then trail runner. Most imminent ladder event in the portfolio.** **ADDS: CLOSED** (partial exit not yet taken).

ONDO — High-beta (1.3) — persistence day 10, no position

- **Catalyst (0.28) = +2.0** (maintained at max): **Ondo launched first tokenized stocks backed by DTC Tokenized Entitlements via DTCC Tokenization Service** (Ondo official blog, July 15). CRCL and SPY tokenized; securities can be converted between traditional and on-chain forms. This is the structural RWA catalyst — Ondo is the execution layer for DTCC's tokenization infrastructure. OUSG \$407M. 24/7 minting/redemption. MEXC added SK Hynix (SKHYON) via Ondo. Tokenized stock execution costs 25–38× cheaper. ONDO +16–18% to \$0.3735.
- **Sentiment (0.30) = +1.0** (unchanged): P=25 → base +1.0 (Fear zone); divergence booster +0.0 (ONDO surging aligned with price recovery).
- **Trend (0.25) = +1.0** (↑ from +0.5): \$0.3735 **reclaiming 200-day EMA (~\$0.377)** — above 20/50/100-day EMAs. Invezz: "reclaiming the 20/50/100-day EMAs, next catalyst is a daily close above the 200-day EMA near \$0.377 to target \$0.40." This is a major trend upgrade — ONDO is reclaiming all major MAs on the DTCC catalyst. A daily close above \$0.377 confirms the 200-day reclaim and upgrades the trend gate to full-size.
- **Regime (0.12) = -0.23** (\$3 cap — fresh catalyst) · **Secular (0.05) = +1.0** (RWA leadership + DTCC integration)

- **D = $0.28(2.0)+0.30(1.0)+0.25(1.0)+0.12(-0.23)+0.05(1.0) = +1.40$** (↑ from +1.00 — trend upgrade on 200-day reclaim). **Conviction:** Strength 0.700, A = $1.337/1.337 = 1.000$, Q 0.95 → $\text{round}(1+9 \cdot (0.837 \cdot 1.000 \cdot 0.989)) = 9$ (↑ from 8)
- **Action: BUY signal — entry decision open.** Trend gate: if ONDO closes above the 200-day EMA (~\$0.377), the gate is at full-size tier. At current-stop risk accounting (\$7c): crypto cluster is \$2,400/\$3,000 → \$600 headroom. ONDO formula risk at Conv 9: Capital \$20,000 × 5% × (9/10) = \$900. **\$600 headroom < \$900 formula risk → cap-constrained at full size.** Options: enter at \$600 risk (67% of formula, Conv 6 equivalent), trim SOL to free space (\$700 → \$400 frees \$300, giving \$900 headroom = full formula), or pass. **The DTCC integration is a structural, not cyclical, catalyst — urgency is high. ONDO at Conv 9 is the highest-conviction signal in the universe.** Persistence day 10 — system nomination expires soon if no entry trigger. Operator decision (→ Operator decisions).

NVDA — High-beta (1.3) — HOT LIST — POSITION OPEN (Day 2)

- **Catalyst (0.32) = +2.0** (maintained): **TSMC Q2 record** — revenue \$40.2B (+36% YoY), gross margin 67.7%, net profit +77.4%, raised 2026 outlook, \$100B US investment. 2nm accounted for 3% of wafer revenue, 3nm 30%, 5nm 30%. AI demand "stays hot" (Investing.com). TSM stock fell ~4% on capex concerns but the demand signal is unambiguous. Combined with ASML beat/raise (prior day), the semi cycle bottoming is now confirmed by both the equipment maker and the foundry. UAE export easing. CPI/PPI soft → risk-on for tech.
- **Sentiment (0.22) = +0.2** (unchanged): P=46 middle band → +0.4·sign(Trend), blended down for crypto-specific fear spillover.
- **Trend (0.26) = +0.5** (unchanged): ~\$210.32–212.50 above 20-day (~\$200–205); below 50-day (~\$215–220) → **starter only, ½ formula size**. Close above \$215–220 upgrades to full size. TSMC beat makes reclaim more likely but TSM's -4% drop on capex concerns is a caution flag for the cluster.
- **Regime (0.15) = -0.23** (high-beta 1.3, R=-0.3) · **Secular (0.05) = +0.5**
- **D = $0.32(2.0)+0.22(0.2)+0.26(0.5)+0.15(-0.23)+0.05(0.5) = +0.82$** (unchanged). **Conviction:** Strength 0.410, A = $0.655/0.845 = 0.775$, Q 0.92 → $\text{round}(1+9 \cdot (0.640 \cdot 0.927 \cdot 0.984)) = 7$ (unchanged — Q up but rounds to same)
- **Action: HOLD — position open** (operator entered July 14 at \$210.87). ½ formula size, Conv 6 at entry; now Conv 7. Risk = \$300 (1R). Stop: \$192.50. Notional: \$3,448. **R-progress: -0.03R to +0.09R** (~\$210.32–212.50 vs \$210.87 entry; entry-to-stop \$18.37 → -\$0.55 to +\$1.63 / \$18.37 = -0.03 to +0.09R). Very early. **Exit ladder:** Rung 1 — +1R/BE at \$229.24; Rung 2 — +1.5R partial at \$238.42. **Scale-up watch:** daily close above 50-day (~\$215–220) generates scale-up ticket (Conv 7, D 0.82 — both clear thresholds). **ADDS: CLOSED (partial exit not yet taken).**

PLTR — High-beta (1.3) — CLOSED 2026-07-13 (no position)

- **Catalyst (0.32) = +1.0** (unchanged): in Trefis support zone (\$122.59–\$135.49); Q2 earnings approaching. PLTR \$133.72 (Tuesday close); no fresh July 16 data.
- **Sentiment (0.22) = +0.5:** PLTR-specific P ≈ 30 → SC +0.50.
- **Trend (0.26) = -0.5:** \$133.72 still below the 20-day MA (~\$135) — gate blocks new entries.
- **Regime (0.15) = -0.23 · Secular (0.05) = +0.5**
- **D = +0.28** (unchanged). **Conviction:** Strength 0.140, A 0.358, Q 0.75 → 3
- **Action: HOLD/AVOID** (no position; trend gate blocks; closed 2026-07-13 at -0.39R). Re-entry requires a daily close above the 20-day MA (~\$135) with D ≥ 0.4 and Conv ≥ 6. D +0.28 < 0.4 and Conv 3 < 6 → not entry-eligible. Watch.

MSTR — High-beta (1.3), BTC-proxy cluster — no position

- **Catalyst (0.32) = -0.5** (unchanged): sold \$467M shares, bought no BTC; \$1.25B BTC-sale option outstanding. Phong Le says won't buy BTC until STRC hits \$100 par. Saylor calls BIP 10 "iatrogenic." Stock dropped below 61.8% Fib at ~\$96 to ~\$92.

- **Sentiment (0.22) = +1.0** (unchanged): P=25 → base +1.0 (Fear zone); MSTR declining with BTC flat — momentum broken.
- **Trend (0.26) = -1.0** (unchanged): ~\$92, below all MAs (EMA20 \$108.91, EMA50 \$128.54, EMA200 \$184.21) — gate blocks.
- **Regime (0.15) = -0.23 · Secular (0.05) = 0.0**
- **D = -0.27** (unchanged). **Conviction:** Strength 0.135, A 0.487, Q 0.75 → **4**
- **Action: HOLD/avoid.** No position; trend gate blocks. BTC holding above 50-day but MSTR diverging negatively — dilution + no BTC purchases + Saylor fighting Bitcoin core devs. A sustained BTC rally above \$65K could lift MSTR, but the BTC-proxy thesis is broken while MSTR sells shares instead of buying BTC.

RKLB — High-beta (1.3) — no position

No fresh data; all prior bearish factors stand (below 200-day, CEO selling \$465M, Iridium concerns, Q 0.65).

Action: HOLD/AVOID (unchanged).

Run notes

TSMC Q2 record beat/raise (\$40.2B revenue, GM 67.7%, +77.4% net profit, raised outlook, \$100B US investment) confirms AI/semi cycle — NVDA unchanged D +0.82 Conv 7; TSM stock fell ~4% on capex but demand signal unambiguous. ONDO D +1.00 → +1.40 Conv 8 → 9 on DTCC tokenized stocks launch (first DTC Tokenized Entitlements, CRCL/SPY) and 200-day EMA reclaim (~\$0.377) — highest conviction in universe, still cap-constrained (\$900 formula vs \$600 headroom), persistence day 10 (expiry risk). ETH at ~\$1,917-1,924 testing 100-day EMA (\$1,943) and descending trendline — +0.86-0.88R, approaching +1R/BE at \$1,950. UNI unchanged D +1.27 Conv 8 — at \$3.64, ~4.4% from \$3.80 partial target; V4 volume +31% to \$1.47B; Clarity Act hearing tomorrow. BTC flat, consolidating above 50-day. Iran: Tehran voided ceasefire, "existential war"; markets pricing through. Decisions pending: ONDO entry sizing (urgency elevated), UNI partial execution, NVDA 50-day reclaim, ETH +1R breakeven.

Operator decisions & watch levels

#	Item	Trigger / level	Action	Detail
1	▢ UNI partial execution	\$3.78-3.80 (~+1.2R)	Take ⅓-½ off (~160-250 UNI, \$533-\$800); then trail runner (chandelier / 20-day)	UNI at \$3.64, ~4.4% from trigger. V4 volume +31% to \$1.47B; Clarity Act hearing July 17 could be the catalyst. Most imminent ladder event.
2	▢ ONDO entry	\$900 formula risk (Conv 9) > \$600 cluster headroom → cap-constrained	Enter at \$600 (67% of formula), trim SOL to free \$300 (→ \$900 headroom = full formula), or pass. Persistence day 10 — expiry risk.	DTCC tokenized stocks launch is structural. ONDO at Conv 9 is the highest-conviction signal in the universe. 200-day EMA reclaim (~\$0.377) upgrades trend gate to full-size. Urgency elevated.
3	▢ ETH +1R / breakeven	\$1,950 (~+1R from entry)	Move stop to breakeven (\$1,720); then partial at +1.5R (~\$2,065)	ETH at \$1,917-1,924, only ~1.4-3.3% from +1R. Testing 100-day EMA (\$1,943) and descending trendline — a break above both likely triggers the breakeven move.
4	NVDA 50-day reclaim	Daily close above ~\$215-220	Scale-up ticket: Conv 7, D 0.82 → full formula \$700, add ~\$400 on top of \$300 starter. New tranche stop below 50-day (~\$210).	TSMC record beat makes reclaim more likely, but TSM -4% on capex is a caution flag. Watch.
5	BTC consolidation	Daily close above ~\$65-66K (50-day confirmation + momentum)	Trend gate at full-size; scale-up doesn't fire (starter > formula). Watch for ETF flow streak.	BTC at \$64,734, holding above 50-day (~\$63,359). ETF +\$181M Tuesday; Wednesday data pending.

#	Item	Trigger / level	Action	Detail
6	SOL exit watch	20-day EMA ~\$74.65 (down) · 50-day ~\$75.96 (reclaimed)	Stable above both MAs. Stop at \$69.19. +1R/BE at ~\$93.19.	Least urgent — position stabilized. If SOL dips below \$75.96 (50-day), downgrade to starter-only.
7	BTC ETF flows	Watch Wednesday's data — sustained inflow streak?	+\$181M Tuesday reversed — \$425M Monday. Sustained inflow → sentiment booster; reversal → watch.	→ step 1 watch items
8	Clarity Act hearing	July 17 (NYC) — House Financial Services field hearing	Crypto-complex catalyst; could boost UNI toward \$3.80 partial target and support ONDO entry thesis.	→ step 1 watch items
9	Oil / Iran	Brent sustained \$85+ into August → July CPI energy re-accelerates; ceasefire → R recovers	Tehran voided ceasefire, "existential war"; US new strikes. Markets pricing through but Hormuz closure would force R deeper.	→ step 1 watch items
10	TSMC capex watch	TSM fell ~4% on capex concerns despite record beat	NVDA cluster demand confirmed but capex/margin pressure could temper semi enthusiasm short-term.	→ step 1 watch items
