

Daily Run — 2026-07-15 (Wednesday)

What changed today: - **PPI June: -0.3% MoM (vs flat forecast), YoY 5.5% (vs 6.2%) — second consecutive major dovish surprise** → R -0.5 → -0.3 - **ASML Q2 beat: €9.3B sales, €2.9B net income, raised 2026 outlook to €43-45B** — semi cycle bottoming confirmed; NVDA +~2% to ~\$211.81 - **BTC tops \$65K for first time since June 22** — ETF inflows return +\$181M (BlackRock IBIT +\$138.9M), reversing Monday's -\$425M - **DTCC tokenization trial live** — Goldman, BlackRock, JPMorgan, Vanguard tokenizing stocks/Treasuries; major RWA catalyst - **UNI fee switch governance votes live** — V4 protocol fees activated, 74-93% support; partial at ~\$3.80 still the next rung - **Iran: ceasefire "in tatters"** — US struck Greater Tunb Island this morning; no progress toward final deal; Brent \$85+ - **NY Fed's Williams: "inflation has peaked"** — expects 3.25% by year-end, 2% in 2028; dovish

§8 Step 0 — Account Parameters

From the 2026-07-14 run header: **Capital \$20,000, MaxLeverage 20x**. GS Tier 1 → heat cap 20% = **\$4,000**.

§8 Step 1 — Regime Read

Off-anchor update — PPI release + ASML earnings + Williams speech. June PPI came in at -0.3% MoM (vs flat forecast), 5.5% YoY (vs 6.2% forecast, down from May's 6%). Core PPI +0.2% MoM (vs 0.4%), core YoY 4.7% (vs 5.2%). This is the second consecutive major dovish surprise after yesterday's CPI (3.5% vs 3.8%). NY Fed President Williams said "inflation has peaked" and expects 3.25% by year-end. ASML beat and raised outlook (€43-45B 2026 sales) — semi cycle bottoming confirmed, positive for AI/tech. BTC surged above \$65K, ETF inflows returned (+\$181M). DTCC tokenization trial went live (Goldman, BlackRock, JPMorgan, Vanguard) — structural catalyst for RWA/crypto. Iran escalation continues (US strikes on Greater Tunb Island, ceasefire "in tatters") but markets are looking past it — equities up, VIX down, oil flat. **R revised from -0.5 to -0.3** — two consecutive soft inflation prints + Williams dovish + ASML beat + crypto recovery clearly offset by Iran/oil, but the balance is shifting toward risk-on.

Input	Value (July 15, 2026)	Signal
10Y UST yield	4.58% (fell from 4.61% post-PPI)	Dovish — yields falling
2Y UST yield	4.17% (fell from 4.21% post-PPI)	Dovish — short-end pricing slower hikes
2s10s spread	~+0.41% (positive, stable)	No recession signal
DXY	~100.2 (est. lower on PPI)	USD softening — risk-on
VIX	16.10 (-2.42%)	Fear easing further
S&P 500	+0.39% (intraday)	Risk-on — PPI relief
Nasdaq	+0.67% (intraday)	Tech leads — ASML catalyst
Dow	+0.17% (intraday)	Lagging — oil/defense weight
Russell 2000	+0.39%	Broad risk-on
Breadth	~67% S&P >200-day MA (est.)	Stable, improving
CNN F&G	43 (Fear)	Unchanged — still Fear but stable
Fed funds	3.50-3.75%	Unchanged; Williams dovish
June CPI	3.5% YoY (prior day)	Major positive surprise (unchanged)
June PPI	-0.3% MoM, 5.5% YoY (vs 6.2%)	▲ Major positive surprise
Core PPI	+0.2% MoM, 4.7% YoY (vs 5.2%)	▲ Major positive surprise

Input	Value (July 15, 2026)	Signal
June payrolls	+57K (unchanged trigger)	Dominant growth signal — payrolls trigger still fired
Gold	~\$4,031–4,067 (slightly down)	Safe-haven bid fading as risk-on returns
Oil (WTI)	\$79.85 (+0.64%)	Elevated but flat — Iran priced in
Brent	\$85.22 (+0.58%)	Elevated — ceasefire in tatters
HY OAS	~269bp (July 10 data)	No credit stress
BTC ETF flows	+\$181.07M Tuesday (BlackRock +\$138.9M)	▢ Inflows returned — reversed Monday's –\$425M
BTC price	~\$64,630–65,100 (+4%)	3-week high; topped \$65K
ETH price	~\$1,877–1,891 (+5–6%)	Strong recovery; approaching 50-day EMA
SOL price	~\$77.42–78.05 (+3–4%)	Recovery; testing 50-day EMA
ASML	€9.3B Q2 sales, raised outlook €43–45B	⚠ Semi cycle bottoming confirmed

R = –0.3 — risk-off but clearly easing. Two consecutive soft inflation prints (CPI + PPI), Williams "inflation has peaked," ASML beat, BTC surging, ETF inflows back, DTCC tokenization live. Iran/oil remains the offset (Brent \$85, ceasefire in tatters, US strikes continue) but markets are pricing through it. The trajectory is toward $R = 0$ if Iran doesn't further escalate. **Zone: CORE** ($|R| = 0.3 < 1.3$).

Regime smile ($RS = 0.6 \cdot R \cdot \beta$): high-beta (1.3) **–0.23** · normal (1.0) **–0.18** · defensive (0.7) **–0.13**

Growth-Score Dial

Trigger	Status	Detail
(a) Payrolls	FIRE ⚠	June +57K; 3-mo avg ~119K, trajectory sharply negative (unchanged)
(b) Curve	not fired	2s10s ~+0.41%, positive and stable
(c) Credit	not fired	HY OAS ~269bp, no >75bp spike above 3-mo low

GS TIER = 1 → heat cap **\$4,000** (unchanged). CPI + PPI both soft significantly reduces the probability of a Tier 2 upgrade. The payrolls trigger remains the sole growth-score signal. Oil sustained at \$85+ into August could still trigger the credit trigger if HY OAS widens, but PPI disinflation reduces that risk.

Watch items (macro — single list)

- **US-Iran escalation (dominant risk):** ceasefire "in tatters" (NPR); US struck Greater Tunb Island this morning (CENTCOM); no progress toward final deal. Iran attacked two UAE tankers earlier. Markets pricing through it (equities up, oil flat) but a Hormuz closure or tanker sinking would force R deeper. De-escalation → R recovers toward 0.
- **Oil at \$85 Brent:** June CPI/PPI energy deflation will partially reverse in July if oil holds. But PPI energy –9.7% MoM (gasoline) shows the current print benefited from pre-spike energy. EIA STEO: Brent averaged \$85/b in June.
- **Warsh Senate testimony today (10am ET):** House testimony yesterday was hawkish ("not mission accomplished," September hike 63%). Senate today could shift odds — a dovish shift would further boost R .
- **Bank earnings this week:** JPM, C, BAC, WFC, GS reported Tuesday — BofA +15% revenue (\$31.7B), investment banking fees strong. MS reports Wednesday. Credit/capex/buyback signals positive so far.
- **DTCC tokenization trial live:** Goldman, BlackRock, JPMorgan, Vanguard tokenizing MSFT, Circle, QQQ, SPY, T-bills. Structural catalyst for RWA/crypto adoption — directly benefits ONDO, ETH, and the broader tokenization thesis.
- **Clarity Act:** House Financial Services field hearing July 17 in New York; 24-day clock to August recess for 60 votes. Tillis revives stablecoin fight with new proposal. Crypto-complex catalyst — no direct action today.

- **BTC ETF flows:** +\$181M Tuesday reversed Monday's −\$425M. BlackRock IBIT +\$138.9M led. CoinDesk: "July flows have been choppy rather than directional." ETF assets back to ~\$78B. Watch for sustained inflow streak.
- **Williams speech (today):** "inflation has peaked," 3.25% by year-end, 2% in 2028. Dovish — supports the R recovery thesis. Combined with soft CPI/PPI, reduces September hike odds (currently 63%, likely to fall).

§8 Step 2 — Freshness Check (Crypto)

Input	Primary source (July 15)	Q impact
Crypto F&G	25 (Extreme Fear, up from 22) — feargreedmeter, KuCoin, CoinGabbbar	□ current, improving
BTC price	~\$64,630–65,100 (Fortune \$64,630 6:30am; Yahoo \$64,621 8:07am; BitcoinFoundation \$64,750–65,100)	□ current, +4%
ETH price	~\$1,877–1,891 (Bybit \$1,877; Fortune \$1,879; KuCoin \$1,891)	□ current, +5–6%
SOL price	~\$77.42–78.05 (Coinbase \$77.42; CoinMarketCap \$78.05)	□ current, +3–4%
UNI price	~\$3.65–3.75 (est. from +4% rally yesterday + broad crypto surge today; Coinpedia "rallied over 4%")	□ current, est.
ONDO price	\$0.308–0.318 (Coinbase \$0.3083; 99bitcoins \$0.314–0.318)	□ current, ~flat
ETF flows	+\$181.07M Tuesday (BloomingBit; SoSoValue via CoinDesk)	□ current — today's data
Oil / Gold	WTI \$79.85, Brent \$85.22 (CNBC); Gold ~\$4,031–4,067 (LiteFinance, CNBC, Yahoo)	□ current
NVDA	~\$211.81 (FX Leaders); Robinhood \$207.57 (yesterday's close)	□ current, +~2%
ASML	€9.3B Q2, raised outlook €43–45B (ASML press release, StockTitan, Investing.com)	□ current — today's earnings
PLTR	\$133.72 (Tuesday close); \$133.95–134.47 (Wednesday intraday, Robinhood)	□ current
MSTR	\$97.045 (Tuesday close); no fresh July 15 data	△ slightly stale
PPI	−0.3% MoM, 5.5% YoY, core +0.2%/4.7% (BLS, Bloomberg, CNBC)	□ current — released today
Williams speech	"inflation has peaked" (CoinDesk, FRBNY Teller Window)	□ current
DTCC tokenization	WSJ via CoinDesk — live today	□ current

Q adjustments (default 0.80): BTC **0.80** (↑ from 0.75 — ETF inflows returned, PPI dovish, price surging) · ETH **0.80** (↑ from 0.75) · SOL **0.78** (↑ from 0.75) · UNI **0.90** (unchanged — fee switch multi-source confirmed, V4 votes live) · ONDO **0.85** (↑ from 0.80 — DTCC tokenization trial directly validates RWA thesis) · NVDA **0.90** (↑ from 0.85 — ASML beat confirmed the semi catalyst) · MSTR **0.75** (unchanged — no fresh data).

§8 Step 3 — Tier-1 Screen

Asset	Price	24h Δ	Flag → Tier-2
BTC	~\$64,630–65,100	+4%	□ 3-week high above \$65K; ETF inflows return; approaching 50-day MA (~\$65K)
ETH	~\$1,877–1,891	+5–6%	□ Strong recovery; 50-day EMA (~\$1,803) reclaimed — trend-gate upgrade
SOL	~\$77.42–78.05	+3–4%	Recovery; 50-day EMA (~\$75.96) reclaimed — trend-gate upgrade

Asset	Price	24h Δ	Flag → Tier-2
UNI	~\$3.65–3.75 (est.)	+4%	V4 fee switch votes live; approaching \$3.80 partial target
ONDO	\$0.308–0.318	~flat	DTCC tokenization trial is a direct catalyst; still at support
NVDA	~\$211.81	+~2%	ASML beat/raise; approaching 50-day (~\$215–220); scale-up watch
PLTR	\$133.72–134.47	+0.6%	Above exit price \$129.43; still below 20-day (~\$135)
MSTR	~\$97+ (est.)	—	BTC +4% should lift MSTR; still below all MAs
ASML	~\$1,797	+0.96%	Beat/raise — semi cycle signal for NVDA cluster
(all others)	—	—	Not screened — no notable data

§8 Step 4 — Tier-2 Deep Dives

BTC — Normal (1.0) — POSITION OPEN (Day 13)

- **Catalyst (0.28) = +1.0** (↑ from +0.5): PPI major dovish surprise (−0.3% vs flat), Williams "inflation has peaked," ETF inflows returned +\$181M (BlackRock +\$138.9M), BTC topped \$65K. DTCC tokenization trial live. Clarity Act hearing July 17. Iran escalation remains overhang but markets pricing through it.
- **Sentiment (0.30) = +1.0** (unchanged): P=25 → Extreme Fear zone (feargreedmeter 25, up from 22); base SC +1.0 (12–25 band → Fear). Divergence booster +0.0 (price recovery aligned with improving sentiment, no divergence). Crypto F&G 25 vs CNN F&G 43 — crypto-specific fear still elevated vs equities, but gap narrowing.
- **Trend (0.25) = +0.5** (↑ from 0.0): Price ~\$64,630–65,100 above 20-day MA (~\$62K) and approaching 50-day MA (~\$65–66K). A daily close above \$65K would upgrade to full-size trend gate. 200-day still above (~\$68–70K).
- **Regime (0.12) = −0.18** ($R = -0.3$, normal $\beta = 1.0$) · **Secular (0.05) = +0.5**
- **D = 0.28(1.0) + 0.30(1.0) + 0.25(0.5) + 0.12(−0.18) + 0.05(0.5) = +0.73** (↑ from +0.49 — catalyst + trend boost)
- **Conviction:** Strength 0.365, $A = 0.589/0.739 = 0.797$, $Q\ 0.80 \rightarrow \text{round}(1+9 \cdot (0.604 \cdot 0.937 \cdot 0.956)) = 6$ (↑ from 5)
- **Action: HOLD** ($D \geq 0.4$, $\text{Conv} \geq 6$ — but position is pre-breakeven, +1R at ~\$67,000 not yet reached; no add signal — ½ formula size starter, trend gate still at starter tier until \$65K daily close confirms). Position: July 3, \$61,500 entry, \$7,830 notional, \$56,000 stop. **R-progress: +0.57R to +0.65R** (~\$64,630–65,100 vs \$61,500 entry; entry-to-stop \$5,500 → +\$3,130–3,600 / \$5,500 = +0.57–0.65R). **Exit watch:** D +0.73 strongly positive; Conv 6. Rung 1. +1R/BE at ~\$67,000. A daily close above \$65K upgrades trend gate to full-size and generates a **scale-up ticket** (Conv 6, D 0.73 — both clear thresholds). Approaching the 50-day is the key watch.

ETH — Normal (1.0) — POSITION OPEN (Day 12)

- **Catalyst (0.28) = +1.0** (↑ from +0.5): PPI dovish + Williams dovish + DTCC tokenization trial (Goldman, BlackRock, JPMorgan tokenizing stocks/Treasuries on-chain — structurally bullish for ETH as the primary settlement layer). BTC ETF inflows + ETH ETF inflows +\$58M (CoinDesk). ETH +5–6% to ~\$1,877–1,891.
- **Sentiment (0.30) = +1.0** (↑ from +0.90): P=25 → base +1.0 (Fear zone); divergence booster +0.0 (ETH recovery aligned with market recovery). ETH outperforming BTC today (+5–6% vs +4%) — mild positive divergence but not at extreme.
- **Trend (0.25) = +0.5** (↑ from 0.0): Price ~\$1,877–1,891 **above the 50-day EMA (~\$1,803)** — trend-gate upgrade to full-size! Also above 20-day (~\$1,713). 200-day still above (~\$2,100+). The 50-day reclaim is the key structural improvement.
- **Regime (0.12) = −0.18** · **Secular (0.05) = +0.5**

- **D = $0.28(1.0)+0.30(1.0)+0.25(0.5)+0.12(-0.18)+0.05(0.5) = +0.73$** (↑ from +0.43)
- **Conviction:** Strength 0.365, A = 0.589/0.739 = 0.797, Q 0.80 → **6** (↑ from 5)
- **Action: HOLD → SCALE-UP TICKET.** ETH has reclaimed the 50-day EMA (~\$1,803), upgrading the trend gate from starter-only to full-size. Per \$7b scale-up mechanics: size tops up to current-conviction full formula risk ($\$20,000 \times 5\% \times 6/10 = \600), counting the starter at its initial risk (\$1,000 OVERRIDE). However, the starter's risk was \$1,000 (OVERRIDE), and the formula at Conv 6 = \$600 — the starter already exceeds formula size. **Scale-up does not fire** — the current position is already above the current-conviction formula risk. The trend-gate upgrade is noted, but no size increase is warranted. **OVERRIDE: risk \$1,000 (5% ceiling) vs \$600 formula at Conv 6 — operator-approved (renewed this run).** Position: July 4, \$1,720 entry, \$7,478 notional, \$1,490 stop. **R-progress: +0.68R to +0.74R** (~\$1,877-1,891 vs \$1,720 entry; entry-to-stop \$230 → +\$157-171 / \$230 = +0.68-0.74R). **Exit watch:** D +0.73; Conv 6. Rung 1. +1R/BE at ~\$1,950. Approaching +1R — if ETH reaches \$1,950, stop moves to breakeven (\$1,720).

SOL — High-beta (1.3) — POSITION OPEN (Day 11)

- **Catalyst (0.28) = +0.5** (unchanged): no fresh SOL-specific catalyst; network fundamentals intact.
- **Sentiment (0.30) = +1.0** (unchanged): P=25 → base +1.0 (Fear zone); no divergence booster.
- **Trend (0.25) = +0.5** (↑ from 0.0): Price ~\$77.42-78.05 **above the 50-day EMA (~\$75.96)** — trend-gate upgrade to full-size! Also above 20-day (~\$74.65). 200-day still well above (~\$99.31). The 50-day reclaim is significant — SOL was the most vulnerable position and has now structurally improved.
- **Regime (0.12) = -0.23** (high-beta 1.3, R=-0.3) · **Secular (0.05) = +0.5**
- **D = $0.28(0.5)+0.30(1.0)+0.25(0.5)+0.12(-0.23)+0.05(0.5) = +0.70$** (↑ from +0.48)
- **Conviction:** Strength 0.350, A = 0.569/0.729 = 0.780, Q 0.78 → round($1+9 \cdot (0.592 \cdot 0.931 \cdot 0.950)$) = **6** (↑ from 5)
- **Action: HOLD → SCALE-UP WATCH.** SOL reclaimed the 50-day EMA (~\$75.96), upgrading trend gate to full-size. Per \$7b: scale-up tops to current-conviction full formula risk ($\$20,000 \times 5\% \times 6/10 = \600), counting starter at initial risk (\$700). Starter risk \$700 > formula \$600 → **scale-up does not fire** (starter already exceeds formula). Position: July 5, \$81.19 entry, \$4,740 notional, \$69.19 stop. **R-progress: -0.31R to -0.26R** (\$77.42-78.05 vs \$81.19 entry; entry-to-stop \$12 → -\$3.14-3.77 / \$12 = -0.26-0.31R). **Exit watch:** D +0.70; Conv 6. Rung 1. Still underwater but structurally improved — the 50-day reclaim reduces downside risk. +1R/BE at ~\$93.19. Stop at \$69.19 remains.

UNI — High-beta (1.3) — POSITION OPEN (Day 12) — APPROACHING PARTIAL

- **Catalyst (0.28) = +2.0** (maintained at max): V4 protocol fees activated (Castle Labs: "Uniswap has activated protocol fees on V4 as well"). Three governance votes live: Robinhood Chain v2/v3 fees, V4 fees, bridge cleanup — 74-93% support (AMBCrypto 74%, Coinpedia/MSB Intel 93%). First sustained UNI burn mechanism. Robinhood Chain contributing ~\$4.38M in daily fees. \$5.2M daily fees maintained. UNI +35% from early-July ~\$2.70 low; +4% yesterday. "Breakout Puts \$5 Back in Focus" (Edaface).
- **Sentiment (0.30) = +1.0** (maintained): P=25 → base +1.0; divergence booster +0.40 — UNI holding/raging while broad crypto was under pressure (maximum-strength decoupling continues, now confirmed through the CPI/PPI regime shift).
- **Trend (0.25) = +1.5** (maintained): above 10/20/50/100-day EMAs; holding the \$3.58 breakout zone. Strongest trend in universe.
- **Regime (0.12) = -0.23 — \$3 confluence cap applied:** fresh idiosyncratic catalyst opposes the macro fade, so RS capped at -0.23 (already small in core zone).
- **Secular (0.05) = +1.0:** dominant DEX, now revenue-generating + burning UNI; DTCC tokenization trial further validates the on-chain settlement thesis.
- **D = $0.28(2.0)+0.30(1.0)+0.25(1.5)+0.12(-0.23)+0.05(1.0) = +1.27$** (↑ from +1.25 — tiny regime improvement). **Conviction:** Strength 0.635, A = 1.267/1.337 = 0.948, Q 0.90 → **8** (unchanged)

- **Action: BUY, position open** (July 4, \$3.20 entry, \$1,600 notional). **Ladder:** rung 2 — stop at **\$3.20 (BE); +0.90R to +1.10R** (at \$3.65: $(\$3.65 - \$3.20) / (\$3.20 - \$2.70 \text{ stop} = \$0.50) \rightarrow +0.90R$; at \$3.75: $+1.10R$). **Rung 3 partial ($\frac{1}{3}$ - $\frac{1}{2}$ off) at ~\$3.80** ($+1.2R$ from entry using original stop distance: $(\$3.80 - \$3.20) / \$0.50 = +1.2R$). UNI is **approaching the partial level** — at ~\$3.65-3.75, only 1-3% from \$3.80. The V4 governance votes this week could push UNI to \$3.80+. **If UNI closes at/above \$3.80, take $\frac{1}{3}$ - $\frac{1}{2}$ off (~\$533-\$800 notional, ~160-250 UNI), move stop to BE on remainder, then trail runner.** This is the most imminent ladder event in the portfolio.

ONDO — High-beta (1.3) — persistence day 9, no position

- **Catalyst (0.28) = +2.0** ($\uparrow$ from +1.5): **DTCC tokenization trial live** — Goldman, BlackRock, JPMorgan, Vanguard tokenizing MSFT, Circle, QQQ, SPY, T-bills. This is a structural catalyst directly validating Ondo's RWA thesis. Ondo already launched 24/7 minting/redemption for tokenized stocks; MEXC added SK Hynix (SKHYON) via Ondo; OUSG \$407M; Ondo Perps live. Tokenized stock execution costs 25-38x cheaper on Ondo. DTCC trial brings the TradFi infrastructure to the same thesis.
- **Sentiment (0.30) = +1.0** (unchanged): P=25 $\rightarrow$ base +1.0 (Fear zone); no divergence booster (ONDO ~flat, aligned).
- **Trend (0.25) = +0.5** (unchanged): \$0.308-0.318 above ~20-day EMA/support (~\$0.31), barely. Needs a close above \$0.32 to confirm.
- **Regime (0.12) = -0.23** (\$3 cap — fresh catalyst) · **Secular (0.05) = +1.0** (RWA leadership + DTCC validation)
- **D = 0.28(2.0)+0.30(1.0)+0.25(0.5)+0.12(-0.23)+0.05(1.0) = +1.00** ($\uparrow$ from +0.84 — DTCC catalyst boost). **Conviction:** Strength 0.500, A = $0.977/1.117 = 0.875$, Q 0.85 $\rightarrow$ $\text{round}(1+9 \cdot (0.707 \cdot 0.961 \cdot 0.967)) = 8$ ($\uparrow$ from 7)
- **Action: BUY signal — entry decision open.** At current-stop risk accounting (\$7c): crypto cluster is \$2,400/\$3,000 $\rightarrow$ \$600 headroom. ONDO formula risk at Conv 8: Capital \$20,000 $\times$ 5% $\times$ (8/10) = \$800. **\$600 headroom < \$800 formula risk $\rightarrow$ cap-blocked at full size.** Options: enter at \$600 risk (Conv 6 equivalent, 75% of formula), trim SOL to free space (SOL at \$700 risk), or pass. **The DTCC catalyst elevates urgency — this is a structural, not cyclical, catalyst.** Operator decision ($\rightarrow$ Operator decisions). Note: SOL has now reclaimed its 50-day EMA, reducing the urgency to trim it.

NVDA — High-beta (1.3) — HOT LIST — POSITION OPEN (Day 1)

- **Catalyst (0.32) = +2.0** ($\uparrow$ from +1.5): **ASML Q2 beat and raised outlook** — €9.3B sales (vs €10.27B consensus but raised 2026 to €43-45B), €2.9B net income, gross margin 54.0%, AI-driven Logic and Memory demand. ~45% growth in installed base management. Intel milestone. Applied Materials already reported record Q2 \$7.91B (+11% YoY), raised 2026 semi-equipment growth to >30%. UAE export easing. CPI/PPI both soft $\rightarrow$ risk-on for tech. ASML stock +0.96% to ~\$1,797.
- **Sentiment (0.22) = +0.2** (unchanged): P=43 middle band $\rightarrow$ +0.4·sign(Trend), blended down for crypto-specific fear spillover.
- **Trend (0.26) = +0.5** (unchanged): ~\$211.81 above the 20-day MA (~\$200-205); below the 50-day (~\$215-220) $\rightarrow$ **starter only, $\frac{1}{2}$ formula size.** Close above \$215-220 upgrades to full size. \$211.81 is approaching the 50-day — a close above would trigger a scale-up ticket.
- **Regime (0.15) = -0.23** (high-beta 1.3, R=-0.3) · **Secular (0.05) = +0.5**
- **D = 0.32(2.0)+0.22(0.2)+0.26(0.5)+0.15(-0.23)+0.05(0.5) = +0.82** ($\uparrow$ from +0.55 — ASML beat boost). **Conviction:** Strength 0.410, A = $0.655/0.845 = 0.775$, Q 0.90 $\rightarrow$ $\text{round}(1+9 \cdot (0.640 \cdot 0.927 \cdot 0.980)) = 7$ ($\uparrow$ from 6)
- **Action: HOLD — position open** (operator entered July 14 at \$210.87). $\frac{1}{2}$ formula size, Conv 6 at entry; now Conv 7. Risk = Capital \$20,000 $\times$ 5% $\times$ (6/10) $\times$ 0.5 = **\$300 (1R)**. Stop: \$192.50 (stop distance \$18.37, 8.7%). Notional: $\$300 / 0.087 = \$3,448$ (~16 shares). **R-progress: +0.50R** (~\$211.81 vs \$210.87 entry; entry-to-stop \$18.37 $\rightarrow$ $+\$0.94 / \$18.37 = +0.05R$... re-calculate: $(\$211.81 - \$210.87) / (\$210.87 - \$192.50) = \$0.94 / \$18.37 = +0.05R$). Actually very early — only +0.05R. **Exit ladder:** Rung 1 — +1R/BE at \$229.24; Rung 2 — +1.5R partial at \$238.42 (take $\frac{1}{3}$ - $\frac{1}{2}$ off, ~5-8 shares); Rung 3 — trail remainder. **Scale-up watch:** a daily close above the 50-day MA (~\$215-220)

generates a **scale-up ticket** — Conv 7, D 0.82, both well above thresholds. The ASML beat makes this more likely. **ADDS: CLOSED (partial exit not yet taken).**

PLTR — High-beta (1.3) — CLOSED 2026-07-13 (no position)

- **Catalyst (0.32) = +1.0** (unchanged): in Trefis support zone (\$122.59–\$135.49); Q2 earnings approaching. PLTR traded \$133.72 (Tuesday close), \$133.95–134.47 (Wednesday intraday).
- **Sentiment (0.22) = +0.5**: PLTR-specific P $\approx$ 30 $\rightarrow$ SC +0.50.
- **Trend (0.26) = –0.5**: \$134.47 still below the 20-day MA ($\sim$ \$135) — gate blocks new entries. Very close to reclaiming.
- **Regime (0.15) = –0.23 · Secular (0.05) = +0.5**
- **D = +0.28** ($\uparrow$ from +0.23 — regime improvement). **Conviction:** Strength 0.140, A 0.358, Q 0.80 $\rightarrow$ **3**
- **Action: HOLD/AVOID** (no position; trend gate blocks; closed 2026-07-13 at –0.39R). Re-entry requires a daily close above the 20-day MA ($\sim$ \$135) with D $\geq$ 0.4 and Conv $\geq$ 6. PLTR at \$134.47 is close — a close above \$135 would unblock the gate, but D +0.28 < 0.4 and Conv 3 < 6 $\rightarrow$ still not entry-eligible. Watch.

MSTR — High-beta (1.3), BTC-proxy cluster — no position

- **Catalyst (0.32) = –0.5** (unchanged): sold 4.8M shares (\$466.7M), bought no BTC; \$1.25 B BTC-sale option outstanding. Saylor calls BIP 110 "iatrogenic" (harm caused by treatment) — fighting with Bitcoin core devs. TD Cowen PT \$260 (199% upside from $\sim$ \$97).
- **Sentiment (0.22) = +1.0** (unchanged): P=25 $\rightarrow$ base +1.0 (Fear zone); MSTR bouncing with BTC (+4% today) — momentum-driven.
- **Trend (0.26) = –1.0** (unchanged): $\sim$ \$97, below all MAs (EMA20 \$108.91, EMA50 \$128.54, EMA200 \$184.21) — gate blocks.
- **Regime (0.15) = –0.23 · Secular (0.05) = 0.0**
- **D = –0.27** ($\uparrow$ from –0.31 — regime improvement). **Conviction:** Strength 0.135, A 0.487, Q 0.75 $\rightarrow$ **4**
- **Action: HOLD/avoid.** No position; trend gate blocks. Improving with BTC recovery but still below all MAs. A sustained BTC rally above \$65K could lift MSTR toward the 20-day (\$108), but dilution overhang + Saylor's BIP 110 fight are negative catalysts.

RKLB — High-beta (1.3) — no position

No fresh data; all prior bearish factors stand (below 200-day, CEO selling \$465M, Iridium concerns, Q 0.65). **Action: HOLD/AVOID** (unchanged).

Run notes

Second consecutive soft inflation print (PPI -0.3% vs flat, core $+0.2\%$ vs $+0.4\%$) plus Williams "inflation has peaked" drove R $-0.5 \rightarrow -0.3$; BTC topped \$65K (3-week high), ETF inflows returned +\$181M (BlackRock-led), ETH +5-6% to reclaim 50-day EMA, SOL +3-4% also reclaimed 50-day. ASML Q2 beat/raise (€9.3B, outlook €43-45B) confirms semi cycle bottoming — NVDA D $+0.55 \rightarrow +0.82$ Conv 6→7. DTCC tokenization trial live (Goldman, BlackRock, JPMorgan) — structural RWA catalyst, ONDO D $+0.84 \rightarrow +1.00$ Conv 7→8 but still cap-blocked (\$800 formula vs \$600 cluster headroom). UNI unchanged D $+1.25$ Conv 8 — approaching \$3.80 partial target ($+1.2R$), V4 governance votes live. ETH and SOL both reclaimed 50-day EMA → trend-gate upgrades, but scale-ups don't fire (starter sizes already exceed current-conviction formula). Iran: ceasefire "in tatters," US struck Greater Tunb Island; markets pricing through. Decisions pending: UNI partial execution, ONDO entry sizing, NVDA 50-day reclaim scale-up.

Operator decisions & watch levels

#	Item	Trigger / level	Action	Detail
1	▢ UNI partial execution	\$3.78–3.80 (~+1.2R)	Take ⅓–½ off (~160–250 UNI, \$533–\$800); then trail runner (chandelier / 20-day)	V4 governance votes this week; UNI at ~\$3.65–3.75, only 1–3% from trigger. Most imminent ladder event.
2	ONDO entry	\$800 formula risk (Conv 8) > \$600 cluster headroom → cap-constrained	Enter at \$600 (75% of formula), trim SOL to free space (\$700 → \$400 frees \$300), or pass	DTCC tokenization trial elevates urgency — structural catalyst. SOL now reclaimed 50-day, reducing trim urgency.
3	NVDA 50-day reclaim	Daily close above ~\$215–220	Scale-up ticket: Conv 7, D 0.82 → full formula \$700, add ~\$400 on top of \$300 starter. New tranche stop below 50-day (~\$210).	ASML beat makes reclaim more likely. Watch today's close.
4	BTC 50-day reclaim	Daily close above ~\$65–66K	Trend-gate upgrade to full-size. Scale-up: Conv 6, D 0.73 → formula \$600, starter \$700 > formula → scale-up does not fire . But gate upgrade enables future adds.	BTC at \$64,630–65,100, testing the level today.
5	ETH +1R / breakeven	\$1,950 (~+1R from entry)	Move stop to breakeven (\$1,720); then partial at +1.5R (~\$2,065)	ETH at \$1,877–1,891, ~3–4% from +1R. Trend-gate upgraded (50-day reclaimed).
6	SOL exit watch	20-day EMA ~\$74.65 (down) · 50-day ~\$75.96 (reclaimed)	SOL now above both 20- and 50-day — structurally improved. Stop at \$69.19 still initial. +1R/BE at ~\$93.19.	Least urgent exit watch now — position has turned around.
7	BTC ETF flows	Watch Wednesday's data — sustained inflow streak?	+\$181M Tuesday reversed –\$425M Monday. "Choppy not directional" (CoinDesk). Sustained inflow → sentiment booster; reversal → watch.	→ step 1 watch items
8	Warsh Senate testimony	Today 10am ET — hawkish (House) vs dovish (Williams) tension	Dovish shift → September hike odds fall, R recovers further; hawkish reiteration → R stable	→ step 1 watch items

#	Item	Trigger / level	Action	Detail
9	Oil / Iran	Brent sustained \$85+ into August → July CPI energy re-accelerates; ceasefire → R recovers	US struck Greater Tunb Island; ceasefire "in tatters." Markets pricing through but Hormuz closure would force R deeper.	→ step 1 watch items
10	Clarity Act	House field hearing July 17 (NYC); 24-day clock to August recess	Crypto-complex catalyst; no direct action today	→ step 1 watch items
